The 5KVP and 15KVP have been designed to work with PowerSight meters only.

The main issue is that connecting the probes to other meters results in an impedance mismatch which results in inaccurate readings.

We have considered re-engineering the probes to work with other devices, but have decided not to because of the high danger present with medium voltages compared to the small benefit to do so for Summit Technology.

Therefore our 5KVP and 15KVP probes are only guaranteed to work with PowerSight meters and we will not sell them to a customer who will use them with some other measuring device.

Use of a 5KVP or 15KVP on a device other than a PowerSight meter voids all warranties for the probes and is undertaken by the user at their own risk, without our permission, expressed or implied, and against our clear unambiguous direction not to do so.

Sincerely,

A handwritten signature in black ink that reads "Ken Kious".
